FOR IMMEDIATE RELEASE:

BLACKSTONE-NEY ULTRASONICS INTRODUCES NEW CLEANING SOLUTIONS AT NPE 2018.

March 26, 2018 – Cincinnati, OH

Blackstone-NEY Ultrasonics, a recognized leader in ultrasonic technology, will introduce a host of advanced cleaning solutions at the NPE 2018 in Orlando, Florida May 7 - 11, 2018. Visitors to Blackstone-NEY Ultrasonics Booth #28201 will be introduced to several new products, technologies and services. Among the new technologies exhibited at the show will be:

- **AgiSonic® Ultrasonic Parts Washer Cleaning** constructed of all stainless steel, is a robust ultrasonic cleaning machine designed for heavy duty parts washing with vertical parts agitation. Available in three standard sizes, each system incorporates an air powered agitation platform that facilitates loading, unloading, and agitates parts with a 6" stroke up to 15 times per minute. The AgiSonic parts automatic filling and liquid makeup (from a customer supplied source), pump and single bag filter, and an overflow weir skimmer and automatic oil removal system, and a lift-off lid. Ultrasonic time, cleaning tank temperature warm up, filtration and oil removal are all digitally controlled using a touch screen interface. Completely self-contained and requiring a three-phase power supply hookup, the largest machine can accommodate a platform load up to 500lbs.

The AgiSonic parts washers are ideal for automotive, aerospace, medical and general industrial applications. These systems can operate in the harshest industrial environment or in precision cleaning applications.

- **Multi-Frequency Ultrasonic Cleaning System:** An ultrasonic cleaning system made of all stainless-steel construction. The Multi-Frequency Ultrasonic Cleaning System is an excellent tool for cleaning small parts on an intermittent to semi-production basis (not recommended for high volume cleaning). These tanks are available for use with single or multi-frequency generators. Blackstone-NEY Ultrasonics is a recognized leader in ultrasonic generator technology. Beginning with the introduction of sweeping frequency in 1988, there has been a continuous stream of development and patents covering new ultrasonic generator and transducer technology from Blackstone-NEY Ultrasonics.

We will have experts at the show providing more in-depth explanations of our technologies and providing suggestions to our customers for improving their cleaning processes.
