FOR IMMEDIATE RELEASE:

CLEANING TECHNOLOGIES GROUP INTRODUCES NEW CLEANING SOLUTIONS AT TECMA 2017

Cleaning Technologies Group, a world leader in providing cleaning and waste minimization technologies, will introduce a host of advanced cleaning solutions at the Tecnología en Maquinas-Herramienta (TECMA) in Mexico City, Mexico March 7 - 10, 2017. Visitors to Cleaning Technologies Group Booth #445 will be introduced to a number of new products, technologies and services. Among the new technologies exhibited at the show will be:

- **Lean-Jet RB-2 Aqueous Immersion Cleaning System** uses a patented washing and rinsing process of agitation, spray impingement, hydraulic purging through immersion and rotation, ultrasonics, and heated blow-off drying. The patented "triple action" batch cleaning process was specifically developed to process a broad range of challenging parts, especially those with internal bores, passages and complex geometries, making this system capable of meeting critical cleaning expectations.
- **Blackstone~NEY Ultrasonics PROHT Ultrasonic Cleaning Tanks** with new features and powered by new "2K Platform" Neptune®, sweepSONIC®, and multiSONIC® ultrasonic generators.

PROHT ultrasonic cleaning tanks and housings are constructed of stainless steel with a duplex stainless transducer radiating surface to significantly extend transducer life. PROHT tanks are available in sizes ranging from 12" by 6" through 36" by 24" and offer the same cleaning capabilities as more elaborate systems at a lower price. They are ideal for laboratory as well as entry-level through small-scale production cleaning. The compact design fits easily on a work bench or can be installed as a bench top drop-in. A digital ultrasonic timer and temperature control are standard features of the new PROHT design.

At the TECMA 2017 show, we will have technical experts available to explain our technologies more in-depth and provide suggestions to our customers to improve their cleaning processes.
