

RANSOHOFF

Buying, Selling and Optimizing Used Ransohoff Parts Cleaning Systems

Ready to upgrade or add capacity to your Ransohoff parts cleaning equipment? Or perhaps your older and/or outdated systems are no longer fully contributing to your parts cleaning operations. In either case, selling these older/outdated, surplus or idle systems back to us can be a great way to 'monetize' these under-performing assets – and, if desirable, buying them back as completely refurbished systems delivering like-new performance but at a significant savings vs. the cost of new equipment.

The process is fast, simple, and pain-free:

1) We'll conduct an evaluation of your equipment and, depending on the make, model and condition, quote a buy-back price.

2) Depending on the make, model and condition, we'll completely refurbish the equipment in preparation for sale – either back to you or to the marketplace. This refurbishment would typically include:

- Rusted or corroded tank and drum rebuild or replacement
- Electrical, piping and mechanical repairs
- Customer-specific re-tooling for new parts production requirements and process improvements.

3) We'll quote you a selling price for this like-new equipment – a system that now can deliver impressive performance improvements and potentially make a significant reduction in your new-equipment investment.

Buying, selling optimizing your old equipment...
