

Ultrasonically Enhanced Parts Washer

Ransohoff's AGI-SONIC™ series part washers are ultrasonically enhanced agitating immersion-cleaning systems that are equipped with rugged, reliable 40 kHz ultrasonic transducers and high performance Neptune™ sweep frequency generators. These solvent-free parts washers utilize three cleaning actions (heated immersion, agitation and ultrasonics) to remove even the most tenacious soils.

- Combines the power of high intensity ultrasonic cavitation with aggressive, vertical agitation.
- Provides improved levels of part cleanliness while greatly accelerating cleaning time.
- Integral surface sparger, oil trap and particulate filter to extend bath life while ensuring more consistent cleaning performance.
- Stainless steel construction for a lifetime of reliable service

Ransohoff AGI-SONIC™ parts washers are ideal for automotive, aerospace and general industrial applications.
